PODs on Sirius

POD tokens were issued on the Sirius platform. Sirius provides a Bitcoin compatible UTXO blockchain with the SIRX token and an Ethereum compatible virtual machine on the same platform. POD tokens are implemented as ERC20 compatible tokens on the virtual machine. To get access to PODs you must set up a Sirius wallet and add the POD token contract to the wallet.

Installing the Sirius wallet

Download and install the appropriate wallet for your platform from https://getsirius.io/ (Scroll down and click on the Windows/Mac/Linux/Docker download link)
Windows users: extract the downloaded file somewhere on your PC where you want to keep it; this is the wallet executable and not just an installer. If Windows shows a warning when you try to run the file, click on Additional Info and select Run Anyway. Allow the wallet in the Windows firewall when prompted.
Mac users: Just run the .dmg file to install the wallet. If MacOS stops you from running the application, locate the app in Finder (don't use Launchpad). Control-click the app and choose open. It is only required once, you can use Launchpad to open it next time.
Let the wallet sync with the network. It is done when the green bar at the bottom has disappeared - this might take a while depending on the speed of your PC and network.

Getting a POD address

Click ERC20 Tokens in the Sirius wallet
Click Add Token
Click on Contract Address and copy and paste
118ed9f558f202ec3e4e4b0f823301d8c42acaa1
into the contract address bar
The Podium Token should now appear in the "Token Name bar"
Click Token Address, and select the address in the drop-down menu
Click confirm, a message will appear saying: "enable log events from the option menu in order to receive token transactions"; click "OK"
Click "Settings" in the TOP menu and click "Options"
Click "Enable log events"; click "OK"
Close the wallet, and open it again by opening the file you downloaded earlier
When prompted to rebuild the block database, select OK
Wait until the wallet is synchronised again

Working with your POD tokens

With your Sirius wallet open, you will now see the POD tokens in the "Other Tokens" box on the main Wallet screen
Click "ERC20 Tokens", right click on the top left bar that says "POD"
Click "Copy Receive address" - You can now receive PODs on this address

You can view the list of token holders and transfers on our Block Explorer here:
